

Northwell has a longstanding commitment to Maimonides Medical Center, and we value our relationship with this institution, which has been a leader in the provision of medical care to a diverse array of Brooklyn communities for more than 110 years. Maimonides is unique among Brooklyn hospitals in the breadth and depth of clinical services it offers.

The health care industry landscape has become increasingly complex, and we recognize the challenges associated with operating a hospital in an environment of shrinking federal and state reimbursements. This is especially true for institutions whose patients largely use Medicare or Medicaid insurance to access care.

At the same time, the pandemic has created additional challenges for hospitals nationwide with respect to staffing and the overall economics of the industry.

We look forward to the opportunity to continue working with Maimonides Medical Center to help address these challenges so that it can continue to advance its mission in service of the communities in its care.
